100% DUICATO
100% ELECTRIC

PROFESSIONAL

Transportation's world is changing and no one knows how it will affect your job more than **Fiat Professional**. After studying **4,000 vehicles** and **50 million kilometers** traveled over the course of one year, **Fiat Professional** has created a vehicle that is **fit for your mission**.

We wanted our vehicles to give you new opportunities, without giving up any capabilities, because at the end of the day, the work needs to get done.

A SUSTAINABLE NEW ENERGY TO GO THE EXTRA MILE.

Ducato is taking its best in class reputation to the field of electric mobility with the widest 100% Electric range in its category. Transportation and mobility are changing, and Fiat Professional has carefully studied 4,000 connected vehicles and over 50 million km's traveled to find which models can benefit from an electric powertrain. From the highly efficient van to the versatile Cab and spacious People Mover, there are more than 80 different configurations to choose from, equipped with a powerful electric motor and automatic transmission. These vehicles carry the forty-year tradition of Ducato's durability and flexibility while setting a new standard for electric capability.

MORE THAN
CHARGING
ENERGY ON THE GO.

Every business functions differently and everyone has different needs. That's why Fiat Professional equipped the new E-Ducato with four different charging options so your business can always stay on the road.

The smart-charge plug fits both AC (alternating current) and DC (direct current) charging configurations. When using an AC setup, E-Ducato gives you the opportunity to choose between a wide range of powers: 7 kW, 11 kW and 22 kW. With the quick charge (AC) and 22 kW power, the estimated charging time for 100 km* in urban is approximately one hour. When needed, the fast charge (DC) with 50 kW power guarantees 100 km* of driving in less than 30 minutes charge.

* Values refer to Van L2H1 version in WLTP City cycle.

AC CHARGE
7 kW
11kW
22kW

DC CHARGE
50kW

YOUR BATTERIES. YOUR CHOICE.

Fit for mission is more than an idea, it's our philosophy. There are two battery configurations: a pack of three modules, generating 47 kWh and up to 235 km* range, or a pack of five modules, producing 79 kWh and 370 km* range. Consequently, a unique feature characterizes the parallel batteries' architecture: the recovery mode, which allows the vehicle to continue its journey despite a module failure. No one knows what you need better than you, but no one is better at giving you more options than us.

* Values refer to Van L2H1 version in WLTP City cycle.

MORE THAN

ELECTRIC

UP TO 370* OF POWER.

Fiat Professional understands the necessity of being ecological, but when the job is on the line, it cannot come at the price of performance or capability. Our job is to help you stay ahead of new business trends, be the vehicle for your future and respect the environment too. Introducing the all-new fully electric Ducato leading the way towards a more green world and new possibilities.

The 90 kW electric engine guarantees impressive performance with a maximum of 280 Nm of torque and speed limited to 100 km/h in order to optimise energy use. Most importantly, the new electric powertrain does not take away from Ducato's trademark quality: best-in-class load volumes from 10 to 17 m³, and payload from 1100 kg to 1950 kg, the best in its category. The vehicle offers also a best-in-class battery size and traveling range for both the 47 kWh and 79 kWh configurations.

MORE THAN TECHNOLOGY

THE TOOLS YOU NEED.

Knowledge is power and Fiat Professional wants to make sure that all the information about your battery is always at your fingertips. The cluster shows different EV features like battery level, eco-index, additional warning lights (e.g. turtle mode, vehicle ready to go), drive mode and eco-coaching indicator. The new control unit is the information hub regarding all the EV features. Carefully track the power flow and charge level at all times to give you extra peace of mind while on the road. The system is organized to show the energy flow with a specific indication of current consumption and the status of the regenerative braking, which helps charge the battery while slowing down. Drivers can receive their driving history in order to see how far they've traveled compared to energy used. Moreover, the new control unit offers additional comfort with smart features like the ability to pre-condition the vehicle to decrease the air conditioning's impact on the battery, and schedule daily charging to take advantage of lower energy costs.

The customer can choose the appropriate Drive Mode to fit specific needs, saving traveling range by optimizing performances:

NORMAL: optimal balance between performance and economy.

ECO: for available range increase.

POWER: facing heavy missions.

Moreover, the driver can also benefit from the e-Coasting/e-Braking features, which increase energy efficiency:

E-COASTING: an energy-saving driving mode that is usually active when the vehicle slows down; in this way the e-motor is not absorbing battery's current.

E-BRAKING: provides vehicle deceleration without brake pedal action; with this mode the e-motor is providing negative torque, in order to recharge the battery.

E-DUCATO IS 100% CONNECT

Whether you are a big company or a small business, your E-DUCATO will be fully connected thanks to Mopar® Connect.

VIA APP: my:Assistant, my:RemoteControl, my:Car (battery state of charge), my:Journey, my:eCharge (charging & AC scheduling)

VIA WEBSITE: My Fleet Manager (monitoring & controlling fleet vehicles in real time)

RAW DATA: interface to the customer Fleet Management Tool

REAR CROSS PATH DETECTION

When in Reverse sensors begin to scan letting you know when vehicles or objects cross your path even when other vehicles may be blocking your view.

FULL BRAKE CONTROL

Radar and video sensors detect whether your Ducato is approaching another vehicle or large obstacle in its path too rapidly and will warn or assist the driver in avoiding/mitigating the incident.

BLIND SPOT ASSIST

These sentry systems continuously monitor the space between you and large objects or other drivers. When a side or rear blind spot is encroached, you're notified via illuminated icons on side-view mirrors or an audible chime.

MORE THAN SAFETY PROTECTION THAT COUNTS.

On the job, things can come at you from every direction. Isn't it time you have a vehicle that does more than just transport your tools and cargo?

E-Ducato offers three new innovative Advanced Driver Assistance Systems (ADAS) that include sensors and technologies to help keep you informed and alert about what is happening all around you. Rear Cross Path Detection, Full Brake Control (FBC) and Blind Spot Assist allow you sense vehicles, danger or obstacles even when they are not in front of you.

Such a complete offering of safety features help you stay focused on the road, and remain on the road by drastically reducing the chance of incidents and severe accidents that put you in harm's way and take you off the job.
